

**Amendments to the Claims:**

Claims 1 and 35-37 are currently pending with claims 1 and 36 having been amended. This listing of claims will replace all prior versions, and listings of claims in the application:

**Listing of Claims:**

1                   1.       (Currently amended) Apparatus for accessing content contained on a  
2 storage medium, the content including a plurality of programs such that each program includes a  
3 plurality of scenes and each scene includes a plurality of frames, the programs and the scenes  
4 include information for moving pictures, the apparatus comprising:

5                   a driver module configured to access the content and having a driver output to  
6 produce an information signal for the accessed content;

7                   a decoder module operatively coupled to the driver module to receive the  
8 information signal;

9                   a user input module configured to receive user input with at least a select button  
10 and/or a cursor button; and

11                  a system control module configured to control, the driver and decoder modules to  
12 produce a first display signal for the plurality of programs, each of the programs being  
13 represented by a single frame in the first display signal, at least these single frames for the  
14 plurality of programs are configured to be displayed on a display module based on the first  
15 display signal,

16                  wherein the system control module, in response to receiving a user-specified  
17 program selection from the select button is configured to control the decoder module to produce  
18 a second display signal for the plurality of scenes, each of the scenes being represented by a  
19 single frame in the second display signal, at least these single frames for the plurality of scenes  
20 are configured to be displayed on a display module based on the second display signal, and

21                  wherein the system control module, in response to receiving a user-specified  
22 program selection from the cursor button, is configured to control the decoder module to play

23 back automatically the selected program as a small frame if there is no button input for a select  
24 period of time.

2 - 34. (Canceled)

1 35. (Previously presented) The apparatus of claim 1, wherein playback is  
2 performed as skipping playback or as fast-forward playback.

1 36. (Currently amended) Apparatus for accessing content contained on a storage  
2 medium, the content includes a plurality of programs such that each program includes a plurality  
3 of scenes such that each scene includes a plurality of frames, the programs and the scenes  
4 include moving pictures, the apparatus comprising:

5 a driver module configured to access the content and having a driver output  
6 configured to produce an information signal for the accessed content;

7 a decoder module operatively coupled to the driver module to receive the  
8 information signal;

9 a user input module configured to receive user input with at least a selection  
10 button or a cursor button; and

11 a system control module configured to control the driver module and the decoder  
12 module to produce a first display signal for the plural plurality of programs, each of the programs  
13 being represented by a single frame in the first display signal, at least these single frames for the  
14 plurality of programs are configured to be displayed on a display module based on the first  
15 display signal,

16 wherein the system control module, in response to receiving a user-specified  
17 program selection from the select selection button, controls the decoder module to produce a  
18 second display signal for the plurality of scenes, each of the scenes being represented by a single  
19 frame in the second display signal, at least these single frames for the plurality of scenes are  
20 configured to be displayed on a display module based on the second display signal, and

21 wherein the system control module, in response to receiving a user-specified  
22 scene selection from the cursor button, is configured to the decoder module to play back

23 automatically the selected scene as a small frame if there is no button input for a select period of  
24 time.

1 37. (Previously presented) The apparatus of claim 36 wherein playback is  
2 performed as skipping playback to fast-forward playback.
